

HEATING TRANSFER & MAINTENANCE PRODUCTS SOLAR SYSTEMS - 2

TECHNOL - SP - 75 (Eco)

INDUST. DEGREASER
(Thermal Oil Remover)

DESCRIPTION: TECHNOL - SP - 75 (Eco), It is a highly concentrated degreaser, water-based, developed to remove synthetic oils for heat transfer from lines and pipes in various industries. The result of the removal is a milky mixture that is completely miscible in water, which gives it the characteristic of biodegradability. This product can be heated to temperatures of up to 85 degrees Celsius to increase its performance, without experiencing changes in its physical-chemical structure, and this makes **TECHNOL - SP - 75 (Eco)**, ideal for removing used oils from pipes in heating or cooling systems in industrial processes, in food processors, tire factories and factories of construction products, etc. It contains corrosion inhibitors and does not attack metals such as steel, copper, brass, or iron, nor the tin solders of the joints. It is easy to rinse and prevents water waste. Its low foam production prevents the accumulation of air inside the pipe during the removal process. Its use on glass or aluminum surfaces is not recommended.

Important Note: The materials used to package our products are 100% recyclables
